

ITEM CONTROL SCHEDULE

Version: **1.03**

Date: 2-Jul-18

Notes: Issued to coincide with update of Operating Unit HPU and SCs, and Mental Health SCs

A. Purpose of the Item Control Schedule

The AusHFG Item Control Schedule (ICS) lists all the items in the AusHFG item library. AusHFG items include room fabrics, furniture, fittings and equipment found within rooms, services and systems that apply to rooms.

The purpose of the ICS is to assist users within the AusHFG community to:-

- select items with pre-identified, standardised coding and naming when briefing, planning and procuring items for healthcare facilities
- provide a framework for documenting linkages of AusHFG items into other systems - for example, to item coding used by architecture firms or to asset management classifications used by asset operators
- correlate items within the database with objects within the AusHFG Revit file resource

B. Format of the Item Control Schedule

The ICS is a report produced in a searchable excel format from item data held within the AusHFG database. It is designed to be printed in horizontal A3 format.

There are several worksheets within the ICS:

Cover Sheet: this page, and contains introductory information and versioning.

Grouping Sheet: indicates the main groupings and sub groupings under which the items fall.

Structure Sheet: explains the purpose of each data field included in the ICS data sheets, plus sets out coding and naming conventions, abbreviations and approaches to dimensioning.

Additional guidance sheets: provide further guidance for users about conventions used within the AusHFG documentation set

Data Sheets: contains the AusHFG items themselves along with their related data, in separate tabs according to their main grouping.

Data in these sheets have filters applied to them, to allow them to be sorted by data field.

Retired Sheet: contains AusHFG items that are retired.

C. Updates to the Item Control Schedule

This document has been created under the guidance of the AHIA BIM Subgroup.

Updates to the ICS will be made:

- following the publication of any new or amended Standard Components or project resources, if any items are new or amended through this process
- following intermittent review by governance groups within the AHIA organisation

Each update of the ICS will receive a new version number and will be dated. Publication of updates will be notified as a News item on the website and by email to users who have subscribed for AusHFG alerts.

To subscribe for alerts, visit <https://healthfacilityguidelines.com.au/subscribe>

To make suggestions regarding additional items or information that should be included in the ICS, use the "Give Feedback" button on the AusHFG website.

ITEM CONTROL SCHEDULE GROUPING SHEET

Items in the ICS are categorised into main groupings and secondary groupings as follows:

Main code	Main grouping	Sub code	Sub grouping
CL	Ceilings & Cornices	CN	Cornice
		FS	Ceiling Flush Set
		GE	General
		TI	Ceiling Tiled
DW	Doors, Windows & Accessories	GE	General
		GL	Door Glazed
		OB	Observation
		PR	Protection
		SC	Door Solid Core
		WD	Window Dressings, Accessories
EL	Electrical Services	BO	Boards & Switches
		GE	General
		GP	GPOs
		GT	Generators & Transformers
		PR	Protection
FI	Fixtures & Fittings	BM	Boards & Mirrors
		DI	Dispensers & Holders
		GE	General
		HR	Hooks, Brackets & Racks
		JO	Joinery
FL	Floors, Floor Finishes & Skirtings	CP	Floor Carpet
		GE	General
		SK	Skirting
		VY	Floor Vinyl
FQ	Furniture & Non-medical Equipment	BS	Domestic Beds & Seating
		CA	Catering & Kitchen Equipment
		CW	Cleaning & Waste
		DW	Desks & Workstations
		GE	General
		SM	Storage Mobile
		SN	Storage Non-Mobile
FS	Fire Services	DE	Detection
		GE	General
		PV	Prevention

Main code	Main grouping	Sub code	Sub grouping
HY	Hydraulic Services	BA	Basins, Baths & Sinks
		DR	Drainage
		GE	General
		TP	Tapware & Outlets
		WC	Toilet Suites
IT	Information & Communications Services	AV	Audio Visual Equipment
		BU	Building Systems
		CL	Clinical Systems & Nurse Call
		GE	General
		IN	Infrastructure Passive
		NE	Network Equipment
LI	Lighting (General)	SE	Security Systems
		FX	Light Fixtures
		GE	General
ME	Mechanical Services	PO	Portable Lighting
		EX	Extract
MG	Medical Gas Systems	GE	General
		SU	Supply
		AS	Gas Outlets
MM	Medical & Laboratory Equipment	FP	Flowmeters & Panels
		GE	General
		AH	Allied Health Equipment
		BE	Beds & Transport Equipment
		DN	Dental Equipment
		GE	General
		HA	High Acuity Equipment
		IC	Infection Control Equipment
		LA	Laboratory Equipment
		MA	Maternal & Infant Equipment
WL	Walls & Wall Finishes	MI	Medical Imaging Equipment
		OP	Operating & Procedure Room Equipment
		RA	Radiation Therapy Equipment
		SP	Services Pendants, Services Panels, Operating Lights
		GE	General
		PR	Wall Protection
		PT	Partitions & Screens
		SH	Shielding
		WA	Wall Finish

ITEM CONTROL SCHEDULE STRUCTURE SHEET

Each data sheet of items in their main groupings is structured as follows:

Excel Column	Column name	Purpose	Notes
A	Item code	Each item is given a unique alphanumeric code to identify it.	Refer notes below for details on how codes are structured.
B	Project specific code	For use by project teams.	A place to identify parallel codes, such as asset codes or codes used for a project by the design team.
C	Item description	The name of each item.	Names are formatted in accordance with the naming convention set out in this document.
D	Extended descriptions	Additional phrases or words to assist in searching for and defining items.	The extended descriptions are a tool to assist with searching within the ICS only - they do not appear in the AusHFG Room Data Sheets.
E	Item code (previous)	The item code used prior to the first publication of the ICS.	To assist teams in cross matching items between previous and current versions of the Standard Component documentation.
F	Item description (previous)	The item name used prior to the first publication of the ICS.	To assist teams in cross matching items between previous and current versions of the Standard Component documentation.
G	Budget group	Identifies a starting point for nominating Group 1, 2 and 3 budget categories for each item.	Project teams should align budget groups as early as possible in the project with the client's preferred procurement methodologies. Refer AusHFG Part F - Implementation.
			Budget Group 1 = items supplied and fixed by the contractor. These are included in the construction contract.
			Budget Group 2 = items supplied by the client and fixed by the contractor. These include items that are transferred but require installation by the contractor.
			Budget Group 3 = items supplied and installed by the client.
			Budget Group 4 = consumable items purchased and installed by the client outside the capital budget.
H	In use in Standard Components	Identifies which items are used in currently published Standard Components.	Yes= in use in one or more currently published Standard Component. No = not in use in any currently published Standard Component.
I-Q	Service allocations	Identifies service allocations required for each item.	Service requirements are compiled only for items in published Standard Components, and must be verified by the project team against equipment selections.
R	AusHFG Revit Content: Family Name	Identifies the family name of items contained within the AusHFG Revit file.	This is for the purpose of navigating the AusHFG Revit model only. Note that some items in the AusHFG RDS are not modelled, e.g. minor items, optional items.
S	AusHFG Revit Content: Type Name	Identifies the type name of items contained within the AusHFG Revit file.	This is for the purpose of navigating the AusHFG Revit model only. Note that some items in the AusHFG RDS are not modelled, e.g. minor items, optional items.

CODING CONVENTION

The alpha letters that represent the main and secondary groupings are joined to make the first four items in the item code. After the alpha code, a three digit number provides a unique identifier for the item.

For example:

Main grouping

FL Floors, Floor finishes & skirtings

plus secondary grouping

CP Floor Carpet

plus unique item identifier

005 FLOOR FINISH: carpet, broadloom, synthetic

generates the code:

FLCP-005 FLOOR FINISH: carpet, broadloom, synthetic

NAMING CONVENTION

The main descriptor is written in caps: CUPBOARD

If the main descriptor is followed by further descriptors, a colon is used to separate. Further descriptors are written in lower case (unless an acronym): CUPBOARD: tall OUTLET: MATV

Further descriptors are separated with commas, e.g. CUPBOARD: tall, double door, adj shelves

If finishes are specified in the AusHFG Standard Components, these are placed at the end of the item name: CUPBOARD: tall, double door, adj shelves, laminate finish

ACRONYMS, ABBREVIATIONS & DIMENSIONS

adj = adjustable

c/o = clear opening

c/w = complete with

AFFL = above finished floor level

C = centigrade

D = deep

diam = diameter

H = high

L = long

nom. = nominal

V = vertical orientation

W = wide

Refer to the extended descriptions with each item for further definitions of acronyms used in item names.

Where measurements are shown as part of an item description, they are in mm unless otherwise specified: WORKSTATION: straight, adj height, 1800W x 750D x 750H nom.

All measurements (other than clear openings) are nominal. Clear opening measurements are minimum measurements.

JOINERY ITEM DIMENSIONS

Various joinery types are included in the ICS. Because of the high variability of joinery sizes, set out dimensions are assumed to be included in documentation prepared by the project team, or specified in sets of child items.

As a result, dimensions are not captured in joinery item descriptions, with the exception of benches and bench tops, where the depth of the bench is used as a primary item identifier as this is a functional feature important to users.

Room Layout Sheets can be referred to for overall joinery sizing.

CREATION OF NEW ITEMS

Each sub grouping of the AusHFG item library allows for up to 999 items to be coded. Item codes 001-499 are reserved for AusHFG use.

Project teams choosing to use the AusHFG coding system within a project can create new items using item codes 500-999.

For example:

A project team may be installing an MRI imaging modality with three components that don't currently appear in the AusHFG ICS.

The team can create the items in the MMMI (Medical Imaging) grouping, from code number 500 onwards: MMMI-500, MMMI-501, MMMI-502

ITEM CONTROL SCHEDULE - ADDITIONAL GUIDANCE

OVERVIEW

The AusHFG are a vital starting point for design based on research, clinical, consumer input and other evidence. The documentation conventions it uses support its primary role as a briefing and design tool for the development of healthcare facilities.

It is expected that project teams will build on the level of data provided by the AusHFG, to suit project requirements. This guidance sheet provides further detail on the documentation conventions used the AusHFG data set, and provides additional guidance for teams who may choose to use the AusHFG documentation conventions for projects.

ITEM NAMING

The name of each AusHFG item firstly describes what the item is. After this, it describes what it is for or provides more detail about the item.

For example:

BUTTON: nurse call, emergency

DOOR: radio frequency, MRI

CEILING: plasterboard, flush set, suspended, paint, scrub resistant

In some instances, the main item descriptor is further augmented with details important to its function and/or the function of the Standard Component room it is located in. These details include dimensional, locational and finishes details.

Dimensional details

Where dimensional and/or capacity details are important to the functionality of the item or to the Standard Component room the item is used in, those details are included in the item name.

DOORS, in many instances, have clear openings specified for them in the AusHFG Standard Components. These clear openings are derived as part of the clinically moderated processes used to develop the Standard Components, and so are a key performance requirement for many of the door items. Where a clear opening (c/o) for a particular door has been derived, it is included in the item name:

DOOR: 1100mm c/o, single leaf, observation panel, solid core/glass, paint

DOOR: 1400mm c/o, 1 1/2 leaf, half glazed, solid core/glass, paint

Where critical to spatial planning or function, items have dimensional details specified for them in their name. These dimensional details are nominal and have been included in the item name in mm, often with abbreviations to indicate length, depth etc:

WORKSTATION: straight, adj height, 1800W x 750D x 750H

TABLE: round, 900 diam, work height

BENCH TOP: 600D, joinery under

Locational details

In some instances, items have locations identified with them (e.g ceiling mounted, wall mounted). This is to assist users in assessing bracketry or wall strengthening needs, to locate frequently occurring items within complex rooms and to allow designers to create different BIM geometries for each locational variant.

For example, commonly specified BRACKETS for display screens are identified as being ceiling or wall mounted:

BRACKET: for display screen, ceiling mounted

BRACKET: for display screen, wall mounted

JOINERY & FURNITURE identifies where the item is underbench, wall mounted or mobile:

CUPBOARD: double door, adj shelves, underbench

CUPBOARD: single glass door, adj shelves, wall mounted

Commonly specified GPO, DATA & MEDICAL GASES OUTLETS have both generic and location-specific codes and descriptors available for them.

The location-specific versions are used in the AusHFG RLS and RDS:

GPO: double, wall mounted

OUTLET: data, single RJ45, in floorbox

OUTLET: oxygen, on pendant

Finishes

The AusHFG item library includes a range of room finishes to support the functional specification of Standard Components.

The details of each finish, which in the previous naming system were provided in separate fields, are included in the item name as illustrated below:

FLOOR FINISH: carpet, broadloom, 48 oz., 90/10 wool/nylon

WALL FINISH: paint, acrylic, washable

CEILING: plasterboard, flush set, suspended, paint, scrub resistant

For FFE items, the AusHFG item library does not typically describe finishes or materials. There are however some exceptions to this, which include shelving, bench top units and noticeboards. The material finish of these items is specified the AusHFG in order to ensure a minimum performance criteria can be achieved.

Where items include a material specification, the material is listed at the end of the item. This example shows a selection of items for 600mm deep bench tops:

BENCH TOP: 600D, joinery under

BENCH TOP: 600D, joinery under, laminate finish

BENCH TOP: 600D, joinery under, stainless steel lipped

Details

Some detailed approaches to item naming and coding are as follows:

MONITOR is used as the main descriptor for all patient monitors.

DISPLAY SCREEN is used as the main descriptor for all computer monitors, AV screens, television screens etc.

The descriptor WORKSTATION refers to a desk.

The item WORKSTATION ON WHEELS refers a mobile item and should be coupled with a COMPUTER item.

TAPWARE is listed separately, in addition to any basin it sits on.

GPOs and data points have numbering related to the number of outlets, e.g. codes ELGP-1xx all represent single GPOs.

Medical imaging systems are listed as both the generic system and as the set of components that make up the system. For example, the item SYSTEM: imaging, MRI is accompanied by approximately 20 components that make up the MRI system, all identified with the word "MRI" in the component name.

Patient beds are listed under Medical and Laboratory Equipment, domestic beds are listed under Furniture and Non-medical Equipment.

USING THE AUSHFG DOCUMENTATION CONVENTIONS FOR PROJECTS

It is acknowledged that the AusHFG item coding and naming systems are often used in parallel to project teams' own systems, and that the architect's coding and naming system can be the one presented to clinical users during design. It is hoped the Item Control Schedule will support teams in managing documentation across the AusHFG and in-house systems.

Teams are encouraged to be innovative in designing their documentation processes. They should not feel obligated to replicate techniques or formats used in the AusHFG documentation and project resources, if more efficient and user-friendly techniques are available and are supported by the client.

For teams which choose to use the AusHFG coding and naming systems in their project documentation, the following paragraphs provide some suggested additional guidance and points to consider.

Adding further detail to items - parent and child

To allow for the expansion of generically-briefed AusHFG items to include further detail generated during design, teams choosing to use the AusHFG coding and naming conventions may consider the use of 'parent and child' item relationships. Using this system, an AusHFG item can be considered a 'parent' for which 'child' items can be created.

Each of the child items inherit all of the attributes and functions assigned to the parent, but is additionally differentiated

ITEM CONTROL SCHEDULE - ADDITIONAL GUIDANCE

USING THE AUSHFG DOCUMENTATION CONVENTIONS FOR PROJECTS (continued)

in some way. This has the advantage of allowing project teams to retain the originally briefed item from the AusHFG, while still being able to add details needed for documentation, selection and procurement.

For example, a project may be specifying the following generic AusHFG item for inclusion in several office spaces:

FIBM-013 NOTICEBOARD: fixed, fabric covered

The project may decide it needs two sizes of noticeboards, in two different colours. The project can develop four child items to handle extra features such as size and fabric type.

Each child item displays the main requirements of the briefed item, but additionally identifies four different types of board:

FIBM-013.1 NOTICEBOARD: fixed, fabric covered, 900W x 600H, fabric type A

FIBM-013.2 NOTICEBOARD: fixed, fabric covered, 900W x 600H, fabric type B

FIBM-013.3 NOTICEBOARD: fixed, fabric covered, 900W x 900H, fabric type A

FIBM-013.4 NOTICEBOARD: fixed, fabric covered, 900W x 900H, fabric type B

Note the suffix number at the end of the code (.1, .2, .3 etc), which identifies each child item. This or any other method could be used to differentiate the codes.

A similar system could also be used to modularize joinery. Joinery items in the AusHFG item library (and as drawn in the AusHFG Revit model) do not have specific sizes assigned to them, on the assumption they will be sized on joinery drawings.

Alternatively, a project may choose to create and control the modular sizing of joinery using child items. For example:

FIJO-135 CUPBOARD: underbench, double door, adj shelves

may have the following modular child items created for differing bench top depths:

FIJO-135.1 CUPBOARD: underbench, double door, adj shelves, 600W x 580D

FIJO-135.2 CUPBOARD: underbench, double door, adj shelves, 600W x 730D

FIJO-135.3 CUPBOARD: underbench, double door, adj shelves, 600W x 880D

The AusHFG Revit model - parent and child

The AusHFG Revit model resource makes use of a limited number of parent and child relationships, to reflect instances where a briefed AusHFG item has different geometric treatments across the various places it appears within the Room Layout Sheets.

For example, some GPOs are shown in the AusHFG Room Layout Sheets in vertical orientation. These are indicated as a child item with the suffix (V). In the Room Data Sheet, the item appears as follows:

ELGP-123 GPO: emergency power, single, wall mounted

If shown vertically in the Room Layout Sheet, the item appears in the Room Layout Sheet schedule as follows:

ELGP-123.1 GPO: emergency power, single, wall mounted (V)

Items such as grab rails, display screens of particular sizes and bespoke joinery units specified in the Room Data Sheets are also occasionally documented in the Revit model (and Room Layout Sheets drawn from the model) as child items, to allow for connection of the item name and code with the different varieties of the item as designed. Any child items in use in the Revit model are also documented in the ICS.

Identifying transfer items using the AusHFG coding system

Teams choosing to use the AusHFG coding and naming systems should agree how transfer items are to be identified within their design data management systems.

A commonly used method is to separately list transfer items against budget groups with a 'T' suffix, e.g. 2T or 3T.

Other methods depend on the data management tools in use, but could include the provision of a marker in the item code itself to indicate a transfer item, or linking instances of scheduled transfer items with briefed FFE quantities.

Creating new items

Refer to the Structure Sheet for methodology.

ICS DATA SHEET: DOORS, WINDOWS & ACCESSORIES (DW)
